Lab 2 — Create a Project with Project Manager

Topic 01: Introduction to Technical Drawing Using AutoCAD Electrical

Maps to: A1, A2 — standardise production with a project; solve multi-drawing organisation problems

Goal

AutoCAD Electrical is project-based: a .wdp project groups interrelated drawings so project-wide functions can retag and renumber. Create a project, add the supplied electrical plan drawings, and reorder them.

What you'll build

A working .wdp project containing the supplied power and lighting plan drawings plus a title block, in the correct sheet order. (Tools: Project Manager · .wdp project file · Power_Plan / Lighting_Plan DWGs.)

Starter files (in this folder)

- 10-2_Power_Plan.dwg — source: github.com/PacktPublishing/AutoCAD-2025-Best-Practices-Tips-and-Techniques

- 10-2_Lighting_Plan.dwg — source: github.com/PacktPublishing/AutoCAD-2025-Best-Practices-Tips-and-Techniques
- Title_Block.dwg — source: github.com/DCS-training/AutocadSelfLearn

Step-by-step

1. Open Project Manager from the Project tab (it is a palette — dock it on the left).

AEPROJECT

2. Create a new project named TRAINING — the .wdp file stores the project description and settings.

Project Manager → New Project → TRAINING

3. Review the Project Properties: library standard (IEC/IEEE/NFPA), component tag format and cross-reference style.

Right-click project → Properties

4. Add the supplied drawings 10-2_Power_Plan.dwg and 10-2_Lighting_Plan.dwg to the project.

Right-click project → Add Drawings

5. Drag and drop the drawings inside Project Manager so the power plan is sheet 1, and add Title_Block.dwg as reference-only.

Drag to reorder · Properties → Reference Only

6. Make TRAINING the active project and open a drawing from the project list by double-clicking it.

Right-click → Activate

Test it

Project Manager shows TRAINING in bold (active) with the drawings in your chosen order, and the .wdp file exists in the project folder — project-wide functions now see every sheet.
